Chamois

August 1 – December 31

In the outskirts of Skopje there's a mountain 2.500 meters high with a big canyon, about 800/1000 meters deep, which was proclaimed the national park of Karadzica, and mount Sara. Around 3500 chamois of the Balkan subspecies live there.

At the beginning of Karadzica canyon there is a hunting house consisting of three single rooms, from where the hunt begins. On mount Sara the hunting house is more Spartan

and the terrain more difficult, but the hunt is made easier hunting from the top down. The hunt is done by stalking on foot.
